Applied Mathematics, Auburn University (Magna Cum Laude)

PROFILE

I find inspiration in the uniqueness of individuals and the vastness of personal preferences and experiences. As a mathematician in a previous career, I am passionate about solving problems. I enjoy the challenge of finding the balance between aesthetics and functionality. A successful design harmonizes the people and the space such that they work and flow together. Whether the priority is blending brand identity into an interior, embracing the local culture, or bringing nature indoors, a design solution should create positive, memorable environments.
